```

```
----- Linux WLAN Configuration Script -----
```

The default responses are correct for most users.

Build Prism2.x PCMCIA Card Services (\_cs) driver? (y/n) [y]: y

Build Prism2 PLX9052 based PCI (\_plx) adapter driver? (y/n) [n]: n

Build Prism2.5 native PCI (\_pci) driver? (y/n) [n]: n

Build Prism2.5 USB (\_usb) driver? (y/n) [y]: y

Linux source directory [/usr/src/linux]:

The kernel source tree is version 2.6.8.

Kernel 2.5/2.6 support is highly experimental.

The current kernel build date is Thu Sep 9 00:03:27 2004.

Alternate target install root directory on host []:

PCMCIA script directory [/etc/pcmcia]:

Module install directory [/lib/modules/2.6.8]:

It looks like you have a System V init file setup.

Prefix for build host compiler? (rarely needed) []:

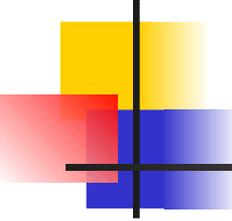

Build for debugging (see doc/config.debug) (y/n) [n]:

Configuration successful.

```
[root@lognight linux-wlan-ng-0.2.1pre21]#
```

Shell

## Compile and install wlan-ng module

---

- `[root@lognight root]# cd /usr/src/linux-wlan-ng-0.2.1pre21/`
- `[root@lognight linux-wlan-ng-0.2.1pre21]# make all; make install;`

For Pcmcia Card Adapter, install pcmcia-cs first.

The latest package is recommended.

Get from <http://pcmcia-cs.sourceforge.net/>

I use pcmcia-cs-3.2.8.

- `[root@lognight src]# tar -zxvf pcmcia-cs-3.2.8.tar.gz`
- `[root@lognight src]# cd pcmcia-cs-3.2.8`
- `[root@lognight pcmcia-cs-3.2.8]#`

```
root@lognight.te.ugm.ac.id: /usr/src/pcmcia-cs-3.2.8 - Shell - Konsole
Session Edit View Bookmarks Settings Help

[root@lognight pcmcia-cs-3.2.8]# ./Configure

----- Linux PCMCIA Configuration Script -----

The default responses for each question are correct for most users.
Consult the PCMCIA-HOWTO for additional info about each option.

Linux kernel source directory [/usr/src/linux]:

The kernel source tree is version 2.6.8.
The current kernel build date is Thu Sep 9 00:03:27 2004.

Build 'trusting' versions of card utilities (y/n) [n]: y
Include 32-bit (CardBus) card support (y/n) [y]:
Include PnP BIOS resource checking (y/n) [n]:

The PCMCIA drivers need to be compiled to match the kernel they
will be used with, or some or all of the modules may fail to load.
If you are not sure what to do, please consult the PCMCIA-HOWTO.

How would you like to set kernel-specific options?
  1 - Read from the currently running kernel
  2 - Read from the Linux source tree
Enter option (1-2) [3]: 2

Module install directory [/lib/modules/2.6.8]:

Kernel configuration options:
  Kernel-tree PCMCIA support is enabled.
  Symmetric multiprocessing support is disabled.
  Preemptive kernel support is enabled.
  Realtime Hardware Abstraction Layer is disabled.
  High memory support is disabled.
```

Module install directory [/lib/modules/2.6.8]:

Kernel configuration options:

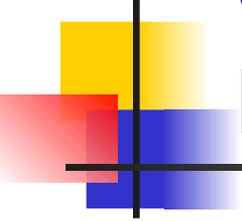

Kernel-tree PCMCIA support is enabled.  
Symmetric multiprocessing support is disabled.  
Preemptive kernel support is enabled.  
Realtime Hardware Abstraction Layer is disabled.  
High memory support is disabled.  
PCI BIOS support is enabled.  
Power management (APM) support is enabled.  
SCSI support is enabled.  
IEEE 1394 (FireWire) support is disabled.  
Networking support is enabled.  
Radio network interface support is enabled.  
Token Ring device support is disabled.  
Fast switching is disabled.  
Frame Diverter is disabled.  
Module version checking is enabled.  
Kernel debugging support is disabled.  
/proc filesystem support is enabled.  
PAE support is disabled.

Configuration successful.

\*\* Your kernel is configured with PCMCIA driver support. Therefore,  
\*\* 'make all' will compile the PCMCIA utilities but not the drivers.  
\*\* See README-2.4 if this is not what you intended!

[root@lognight pcmcia-cs-3.2.8]#

# Compiling and installing, setting configuration pcmcia-cs and starting pcmcia daemon

---

- make all
- make install

Now go to `/etc/pcmcia` and edit `*.conf` and `*.opts`

- `/etc/init.d/pcmcia start`

```
Starting PCMCIA services: cardmgr[23313]: watching 1
socket
done.
```
